Klamath National Forest

Attention Hikers and Trail Users

You are entering an area that recently burned during a lightning-caused wildfire.

There are hazards that may not be obvious to you.

Wildfires create impacts to the trees, vegetation, soil and the landscape.

Please be aware of possible hazards that may include:

- Burned-out stump holes.
- Burned trees and snags that are especially hazardous in windy conditions that will fall suddenly without any warning.
- Slippery trail conditions from ash and needles.
- Burned vegetation cover creates loose rocks that may roll and logs that may slide down slopes.
- Flash flooding can occur with little or no warning.

Please be aware of your surroundings.

Don’t take conditions for granted.

Conditions will change suddenly and without warning.

Be prepared for the unexpected.

Check current weather conditions before you go.

Let someone know where you are and when you plan to return.

Please report any unusual conditions to your local Ranger District or call the Klamath National Forest Information Center at 530-841-4517.
